DETAILED ACTION

Receipt is acknowledged of the "conditional" request for a Continued Prosecution Application (CPA) filed on 02/26/04 under 37 CFR 1.53(d) based on prior Application No. 09/218,213. Any "conditional" request for a CPA submitted as a separate paper is treated as an unconditional request for a CPA. Accordingly, the request for a CPA application is acceptable and a CPA has been established. An action on the CPA follows.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 30 of U.S. Patent No. 6,433,040 ('040) in view of USPN 6,630,169 ('169). Although the conflicting claims are not identical, they are not patentably distinct from each other because the '040 claims a method for pulmonary delivering one or more bioactive agents comprising a stabilized

Art Unit: 1615

dispersion contains plurality of perforated microstructures suspended in suspension medium, wherein the volume of suspension medium displaced by the perforated microstructure is less than 70% of the average particle volume of the perforated microstructure. The '040 does not teach the nebulizer uses to delivery the dispersion. The '169 teaches the use of nebulizer for the administration of microstructures dispersed in suspension medium (claims 26, 27 and 29). Thus, it would have been obvious for one of ordinary skill in the art to use the pulmonary composition taught by the '040 with the nebulizer in view of the teaching of the '169 wit the expectation of a similar result. There are no unusual and/or unexpected results, which would rebut prima facie obviousness.

Pertinent Arts

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Robertson et al. and Roser are cited as of interest for the teachings of pulmonary formulations.
